

VELOPLUGS

They're out of this world!

You can search the entire universe and you won't find anything quite like the Veloplug.

The Veloplug is an amazing new invention, patent pending. **Why wrap your complete rim with a roll of heavy cloth tape when for less than half the weight you can use the Veloplug.**

Tape = 16 grams

OR...

32 Veloplugs = 6 grams

It's your choice!

Fewer spokes? Then the savings are greater!

Clean and neat. No sticky tape gum.

Legs clip in so the Veloplug will not fall out when changing a tire.

Incredible blow out strength and takes well over 400psi. Tires and rims start to fail long before the Veloplug.

Tire mounting is easier with the Veloplug. Rim strips take up a lot of space making tires more difficult to mount. With the sleek and slippery Veloplug, a difficult to mount tire becomes easy.

Spoke replacement is simplified as there is no need to remove a sticky strip. Just pop out the Veloplug over the offending spoke and pop it back in when repairs are complete. They can be used over and over.

The Veloplug fits any rim with a nominal 8mm web hole. This covers most of the Velocity range as well as many 'Brand X' rims.

Sold in packets of 72 for retail sales or in bulk packs of 1000 for shop use.
